elite range of products

Hazardous Substance Safety Products

Robust quality manufactured
cabinets conform to
Health & Safety
Executive Guide HSG51
and DSEAR 2002

UK Manufactured Products

Hazardous Substance

These robust cabinets benefit from welded seams to increase structural stability and reduce the risk of leakages.

NEW
Extended Range

Hazardous substance safety cabinets are manufactured to satisfy The Highly Flammable and Liquefied Petroleum Gas Regulation 1972, where appropriate, The Health and Safety Executive Guide HSG51 and DSEAR 2002. Heavy gauge construction using high quality mild steel that gives extra strength and rigidity to help withstand industrial environments. These robust cabinets benefit from welded seams to increase stability and to reduce the risk of leakages. They have been designed with an integral leak proof base sump for extra prevention against leakages and possible contamination of the cabinets exterior. Doors are reinforced with steel door stiffeners and fixed within a rebated frame to prevent buckling under extreme conditions.

For extra security and strength, several units benefit from three point locking to the doors. Doors incorporate welded semi concealed five knuckle hinges which are rivetted to the cabinets frame with steel rivets. Cabinets are supplied with galvanised adjustable shelves (excludes acid cabinets). Quality chrome locking handle supplied with two keys. Cabinets are pre treated and epoxy polyester powder coated to give a durable paint finish. Labelling complies with current guidelines. These products are not fire proof.

Storage Facilities

It is important to ensure that only the minimum amount of flammable liquid needed to carry out the work is stored in workrooms, laboratories etc. The Highly Flammable and Liquefied Petroleum Gases Regulations 1972(3) require that no more than a maximum of 50 litres of highly flammable liquids may be stored in workrooms etc, and they must be kept in suitable cabinets or bins in designated areas away from working or processing areas.

Control of Substances Hazardous to Health Regulations apply to virtually all UK workplaces. There are mandatory requirements for employers to carry out Coshh Risk Assessments. Substances hazardous to health are those products that are capable of causing adverse effects or disease arising out of exposure from work activities. It is the employers responsibility to gather information on these products and either eradicate the risk or at least control it. Any substance labelled as Toxic, Irritant, Corrosive or Harmful fall within identifiable categories defined by Coshh.
